

YADNYESH HEMANT HALDE

B.Tech Student – Artificial Intelligence & Data Science | Aspiring AI/ML & Full-Stack Developer

+91 9867637173 | haldeyadnyesh88@gmail.com | [LinkedIn](#) | [GitHub](#) | Mumbai, India

PROFESSIONAL SUMMARY

Third-year B.Tech student in Artificial Intelligence & Data Science with hands-on experience designing and shipping five independent full-stack and AI-driven applications, from an adaptive learning platform to deployed production web tools. Proficient in Python, JavaScript, and modern AI/ML and web-development frameworks (LangChain, React, Node.js, FastAPI). Hackathon winner with experience across 10+ competitive hackathons, comfortable building under tight deadlines and shipping working products end-to-end. Seeking an AI/ML, Data Science, or Full-Stack Development internship to contribute technical and problem-solving skills to real-world engineering teams.

EDUCATION

K.J. Somaiya Institute of Technology

B.Tech in Artificial Intelligence and Data Science

Mumbai, India

Expected Graduation: 2028

TECHNICAL SKILLS

Languages: Python, JavaScript, C, C++

AI / Machine Learning: Machine Learning, NumPy, Pandas, Matplotlib, LangChain, Streamlit

Web Development: React, Node.js, Express, FastAPI, Django, HTML, CSS, Tailwind CSS, Bootstrap

Databases: MongoDB, MySQL, SQLite

Tools & DevOps: Git, GitHub, Docker, Jupyter Notebook

PROJECTS

Teslearn — AI-Powered Adaptive Learning Platform

- Designed an AI-driven adaptive learning platform that personalizes educational content to individual student learning patterns, addressing the limitations of static, one-size-fits-all e-learning content.
- Built the personalization engine in Python using machine learning techniques and a NumPy/Pandas-based data pipeline, independently owning the project from problem framing through implementation.

MakeFunnyMemes — Full-Stack Meme Generation & Sharing Platform

makefunnymemes.com

- Built and deployed a full-stack JavaScript web application that lets users create, customize, and share memes, taking the product from concept to a live, publicly accessible site.
- Implemented both frontend and backend independently, handling UI, server logic, and deployment — demonstrating ownership of the complete development lifecycle.

SkillBridge — Student-to-Opportunity Career Matching Platform

- Built a platform that bridges the gap between students' skill sets and current market internships and jobs, improving the relevance of opportunities surfaced to each student.
- Designed the core matching logic connecting student profiles to suitable openings, reducing the manual effort of searching across listings.

Additional Projects

BackendPrep — Backend Interview Preparation Platform

backendprep.com

- Built and deployed an online platform offering curated resources and practice material to help developers prepare for backend engineering interviews.

OpenTrek — Trekking Route Discovery & Planning Platform

open-trek-platform-4.onrender.com

- Developed and deployed a platform for trekking enthusiasts to discover, plan, and share trekking routes and experiences.

ACHIEVEMENTS & CERTIFICATIONS

- Won a 24-hour Hackathon at RIIDL, Somaiya Vidyavihar University.
- Competed in 10+ hackathons across AI, web development, and other technology domains, building experience in rapid prototyping and collaborative problem-solving under time constraints.
- Python Programming — Udemy (Certification)
